NAVTECH DOUBLES INSTRUMENTED DETECTION RANGE WITH TWO NEW RADAR SENSORS

Navtech Radar are launching two new radar models with higher sensitivity and a wider beam shape, allowing an increased range of detection, greater flexibility over uneven ground, quicker set-up and the capability of being mounted up to 10 metres from the ground. Both of these models will include an enhanced enclosure design that will improve environmental protection and heat dissipation. Power consumption is also reduced by 25%.

Benefits:

- Cost effective coverage of large areas - up to 1600 metre radius.
- Flexible mounting height – up to 10 metres.
- Improved line-of-sight coverage over cluttered areas.
- Reduced power consumption enabling battery or solar power options.
- Better environmental protection for harsh environments.

WITNESS

NEW IMPROVED FEATURES TO WITNESS CONTROL SUITE

- Support for additional sensors such as PIR and broken beam.
- Improved alarm and threat management enabling detection areas to be armed or disarmed.
- New integrated radar data display providing immediate feedback for configuration and tuning.
- Improved camera control enabling operators to instruct the camera system to follow a target exclusively.
- Enhanced UI control enabling users or supervisors to customise the radar management display.
- Improved API which allows third parties to control key elements of the system's behaviour via a simple XML interface.
- SMS (text) alerts for mobile locations and remote sites.

EVENTS

IFSEC 2011

Navtech Radar will be exhibiting at IFSEC 16 - 19 May, 11 at the NEC in Birmingham. Visit us in Hall 4, Stand A6. Our custom equipped Land Rover will be outside the main entrance of Hall 5, demonstrating the new AGS sensors and enhancements to the witness control suite.

On our stand we will be demonstrating our witness software with live radar coverage - showcasing the improved zone management capabilities of the witness control suite.

SPEAKER SLOT AT IFSEC 2011

Jason Burger will be speaking at IFSEC on Monday 16 May at 13:45 - 14:15, theatre 1.

The presentation will consist of an overview of how **AvanceGuard** works including suitable applications and highlighting new products and services.

The audience will see the benefits from video footage of people being tracked and how **witness** software works together with the radar to provide an intelligent security solution.

For your free ticket for IFSEC please use this link: <http://www.cts-online.co.uk/reg.asp?showcode=ifsec11&cbcode=Navtech>
